

# MANAGED ACCESS CONTROL

Security services to manage your facility  
with confidence

# SECURITY WITH FLEXIBILITY

The main purpose of an access control system is to control movement from one area to another. Your employees are given a personal key card, fob or code that they use at readers or keypads. You also assign “rights” to each employee that give them access only to certain doors or areas and/or only on certain days and times.

Managed Access Control & Security Services let you reap the full benefits of your system with fewer headaches. We can track employee movement and provide detailed reporting that lets you review who went where and when.

Focus on your business while we focus on keeping it safe and secure.

## MANAGED ACCESS CONTROL SERVICES

You can rely on our trained professionals to serve as your remote “security force.” Our Managed Access Control and Security Service provides around-the-clock monitoring and management of your alarms and access control. From our monitoring center we can provide full-time oversight of your facility’s security and access control systems. That ensures a fast, appropriate response to alarms and quick updates to user data or system configuration.

We provide total turnkey services. Based on your instructions, we will appropriately respond to security issues with no action required on your part. We also offer an optional web portal that lets you view and modify various aspects of your system from anywhere you have an Internet connection.

## WEB BROWSER INTERFACE

Through the optional Web Portal Service, you can log into your system from any Internet-connected computer at any time and take control. Add, delete or modify user access. Access complete data and customized reports regarding alarm status, activity at every access point and the movement of each authorized user.

## MANAGED ACCESS SERVICES OFFERS CUSTOMIZED CONTROL

We will work with you to create a customized plan to protect all areas and buildings or only selected buildings or areas.

Contact us with any needed updates to employee rights, or changes to your door schedules and configurations, and they will be quickly implemented. We can add your new employees, modify employees' access privileges, or remove access entirely, so you never have to re-key a door again.

## WIRELESS ENTRY

The one- and two-button wireless key fobs provide the ability to arm/disarm security systems or transmit a panic command. The built-in proximity credentials add the ability to arm/disarm and interact with access control proximity readers.

All 1144 Series Key Fob transmitters are portable, water resistant and designed to be clipped to a keychain or lanyard. The LED visual display acknowledges when a button is pressed, providing confirmation with a unique color-coded response.

### **NO ADDITIONAL HARDWARE OR SOFTWARE**

We will provide all required technology, so you don't have to purchase any additional computer resources or software at your site. We connect your security system to the Internet, with no special hardware or software.

Because there's no additional hardware or software on your premises, there's nothing to program or upgrade, and no training required for your employees. We manage all routine access control system requirements, including full backups of your database.

### **24-7-365 PROTECTION**

Our trained professionals provide around-the-clock service, documenting the movement of people in and around your facility, freeing your staff from all routine security monitoring and management responsibilities.

Based on your customized response plan, we will address each security event and summon fire or security forces when appropriate. We will manage your security 24 hours a day and make real-time changes with a simple phone call or e-mail from your system manager.

### **YOUR SECURITY PROFESSIONALS**

We let you focus on your business while we focus on keeping it safe and secure. You get access control and a professionally monitored security system priced lower than a traditional stand-alone access control system. Your system will be totally customized, sized and configured to meet your requirements.

You can feel confident that you're realizing the greatest possible protection from your security system and are providing solid security for your facility, employees and assets.
